## Webcam use

We plan on using the Adobe Connect platform and webcams as part of our virtual meeting format. Adobe Connect Mobile information is provided below. Using multiple webcams is new territory and there may be bandwidth limitations, but we feel it will hopefully enhance member collaboration. We are going to use the Raise

Hand button  in the menu bar to help facilitate meetings in an orderly fashion.

- **Showing your image when selecting "Start My Webcam"** - ensure that your camera is plugged in and recognized by the computer before entering the meeting. If not, camera drivers might need to be updated or installed. Also be sure to grant access permission to Flash Player for the camera and microphone in the dialog box that appears when starting the broadcast.
- **Audio** - be sure the microphone level on your PC is not muted and is set at an adequate volume level. Use the Advanced Volume Control settings in the Flash Player control panel to adjust settings. We recommend that all first-time users run the Audio Setup Wizard under the Meeting menu, located on the upper-left corner of the Adobe Connect meeting interface. Note: to avoid distraction, presenters will not be able to hear themselves speaking in a meeting.
- **Meeting Connection Diagnostics** - visit the diagnostics site in advance: [https://connectdot.connectsolutions.com/common/help/en/support/meeting\\_test.htm](https://connectdot.connectsolutions.com/common/help/en/support/meeting_test.htm)
